

Ref. No: FOI0126  
Date: 10/07/2023  
Subject: Staff type by speciality

## REQUEST

I am currently researching the staffing levels for certain specialities across NHS trusts. I am focused on understanding the split between the number of procedures performed by employed doctors and those performed by outsourced doctors. To clarify:

**Employed doctors** – Doctors who have ongoing employment in the NHS

**Outsourced doctors** – Doctors from agencies or ones who are contracting

If you could please provide the number of procedures performed by each type of doctor per year from 2017-18 up to 2022-23 **split by the following specialities**, that would be much appreciated:

- 1.) Gastroenterology – All medical Gastroenterologists
- 2.) Gynaecology – Please split out Obstetrics from this
- 3.) Urology – A split of only the urology surgeons
- 4.) Dermatology – All medical dermatologists
- 5.) Cardiology – All cardiologists and excluding cardiothoracic surgeons
- 6.) Endocrinology – All Endocrinologists
- 7.) ENT – A split of only all ENT surgeons

I have attached an Excel for you to fill out the relevant data by speciality and split between employed vs outsourced doctors

## RESPONSE

Please see attached Excel Spreadsheet
