What is self-catheterisation?

Self-catheterisation means that you insert a small, flexible plastic tube into the bladder. The urine flows out through this tube which is then removed and washed. By emptying the bladder regularly in this way, you will prevent a build-up of stagnant urine and should feel more comfortable. You will also be keeping the kidneys and bladder healthy by preventing urinary infections. Some people find that they have less difficulty preventing themselves becoming wet using this technique.

What equipment do I need?

- ◆ A catheter – supplied at first by the outpatient clinic and then available to order on prescription from your GP
- ◆ Baby wipes

How do I do it?

- ◆ Wash your hands thoroughly
- ◆ Remove your pants and tuck other clothing out of the way
- ◆ Roll back the foreskin and wash the end of the penis using baby wipes or soap and water
- ◆ Hold the penis straight out from the body and, without touching the catheter on anything else, slowly and gently insert it until urine flows
- ◆ If the catheter seems to stick just before it enters the bladder, wait a few seconds to allow the sphincter (valve) muscle to relax and then push it gently in a little further
- ◆ Withdraw the catheter slowly
- ◆ Get yourself in a comfortable position, you can choose from sitting or standing by the toilet
- ◆ When the flow stops move a little to make sure that the bladder is completely empty
- ◆ Dispose of the catheter properly by putting it in a disposal bag before putting it in the household rubbish
- ◆ Wash your hands again

Personal Information

Use the catheter times a day

Discard the catheter and use a new catheter for each catheterisation (catheters are single use and are not re-usable)

Catheter Information

Catheter recommended
(male)

Size F

Are there any other important points?

This publication provides input from specialists, the British Association of Urological Surgeons, the Department of Health and evidence-based sources as a supplement to any advice you may already have been given by your GP. Alternative treatments can be discussed in more detail with your urologist or Specialist Nurse.
